No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                Score

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CC polypeptide (II) sequences. (I) is useful as hybridisation probes, CC and gene mapping, and in recombinant production of (II). The CC and gene mapping, and in recombinant production of (II). The CC and gene mapping, and in recombinant production of (II). The CC and gene mapping are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques CC to restore normal activity of (II) or to treat disease states involving CC (II). (II) is useful for generating antibodies against it, detecting or CC quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating CC imaging of sites expressing (II). (I) and (II) are useful for treating CC disorders involving aberrant protein expression or biological activity. CC The polypeptide and polynucleotide sequences have applications in CC diagnostics, forensics, gene mapping, identification of mutations CC responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and CC amino acid sequences. ABG00010-ABG30377 represent novel human CC diagnostic amino acid sequences of the invention.

Note: The sequence data for this patent did not appear in the printed content of the formation of the formation of the formation.

receptors. These proteins function as olfactory receptors, and are thought to be members of the G protein-coupled receptor (GPCR) superfamily, which is characterised by the presence of 7 transmembrane helices. Nucleic acids encoding the Drosophila odorant receptors may be used to generate expression constructs, host cells containing such constructs, and transgenic insects. Cells which express the odorant receptor genes may be used in methods to identify agents which modulate expression of these genes, and in methods to identify receptor binding partners. The Drosophila odorant receptor nucleic acids may also be used to identify corresponding genes in other insects, such as those which damage crops or transmit disease. The odorant receptor proteins may be used to identify agents which modulate their activity, to identify binding partners, as antigens to raise antibodies,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence is the previously identified Drosophila melanogaster odorant receptor DOR83. The odorant genes and proteins, such as those provided by the invention, are useful as they aid in the study of the olfactory organ in mammals, as well as aiding the understanding of the link between odour recognition and behaviour in insects. They also enable the identification of compounds capable of activating and inhibiting the receptors, allow the control of pest populations via the use of alarm odour ligands and via the use of ligands which interfere with the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    25-JAN-1999;

The proteins may be also be used in methods of behaviour modification. Such methods may be used to study or modify insect behaviour in response to odorants such as pheromones. Modification of insect behaviour has a wide range of applications, such as in pest control (e.g., by disrupting the feeding or mating behaviours of pest species), or for enhancing plant pollination (by attracting pollinator species). Odorant receptor proteins and/or nucleotides may also be used to identify appetite suppressants, to trap odours of a specific type, as biosensors for the detection of explosives, drugs, perfumes or pollutants, and in apiculture to modify the behaviour of bees, for example, to increase the production of royal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Simian immunodeficiency virus; SIV;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a single exon nucleic acid probe (SENP) (I) for measuring human gene expression in a sample derived from human adult liver, comprising one of 13109 defined nucleotide sequences given in the specification (or complements) fragments). The probe hybridises at high stringency to a nucleic acid molecule expressed in the human adult liver. (I) may be used for predicting, measuring and displaying gene expression in samples derived from human adult liver. The genes identified may be involved in genetic liver diseases such as cirrhosis, hyperilipoproteinaemia, hyperilipidaemia and hypercholesterolaemia which is associated with coronary heart disease. ABG47348-ABG59930 represent Note: The sequence information for this patent does not appear in the printed specification but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

                                                                                                         Protein #8985
                                                                                                                                                                                                                                                                                                                                                        The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a peptide encoded by a single exon nucleic acid probe of the invention.
                                                                                                                             23-JAN-2002

                                                                                                                     The present invention relates to single exon nucleic acid probes for measuring human gene expression in a sample derived from human heart (see ABA21535-ABA41305). The present sequence is a protein encoded by one such probe. The probes may be used for predicting, measuring and displaying gene expression in samples derived from the human heart via microarrays. By measuring gene expression, the probes are useful for predicting, all diagnosing, grading, staging, monitoring and prognosing diseases of the human heart and vascular system e.g. cardiovascular disease, hypertension, cardiac arrhythmias and congenital heart disease.

Note: The sequence data for this patent did not form part of the printed at fits whose, introductions but was obtained in electronic format directly from WIPO at the publicability of the printed at fits whose into intending the form sequence.
                                                                                                                                                                                                                                                                                                                                                                         WPI;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human probes which may enable used to measure gene expression in bone marrow samples, which may enable the improved diagnosis and treatment of cancers such as lymphoma, leukaemia and myeloma. The present sequence is a protein encoded by one of the probes of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence
                                                                      by one such probe. The SENPs are derived from human HeLa cells. The can be used to produce a single exon microarray, which can be used measuring human gene expression in a sample derived from human cerv epithelial cells. By measuring gene expression, the probes are ther useful in grading and/or staging of diseases of the cervix, notably
                                                                                                                             The present invention relates to human single exon nucleic acid probes (SENP: see AAI10068-AAI28459). The present sequence is a peptide encoded by one such probe. The SENPs are derived from human HeLa cells. The SENPs
                                                                                                                                                                                                       Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human cervical epithelial cells -
                                                                                                                                                                                                                                                                                                                                                                                                                               30-JAN-2001;

The present sequence is a peptide encoded by one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of

measure gene expression in human lung samples Spatially-addressable set of single exon nucleic acid probes, used ç

Claim 27; ID No 634pp; English.

cc nucleic acid expressed in the human lung; measuring gene expression in a contacting the derived from human lung, comprising (a) contacting the array with a collection of detectably labeled nucleic acids derived from human lung comprising (a) contacting the array with a collection of detectably labeled nucleic acids derived from human lung cmRNA, and (b) measuring the label detectably bound to each probe of the array; identifying exons in a eukaryotic genome, comprising comprising conditions and (b) detecting at least one exon from genomic sequences of the eukaryote; and (b) detecting specific hybridisation of detectably labeled nucleic acids from eukaryote lung mRNA, to a single exon probe, can be above mentioned microarray; assigning exons to a single exon probe comprising (a) identifying exons from genomic sequence by the method comprising (a) identifying exons from genomic sequence by the method comprising (b) measuring the expression of each of the exon in several confiction of the exon probe with the exon, where a common pattern of expression of the exons in the tissues and/or cell types indicates that the confiction of the exons that the exons the expression of the exon pattern of the expression of the exons in the tissues and/or cell types indicates that the confiction of the exons that the expression of the expression of the exons that the expression of the expression of the exons that the expression of the e the exons should be assigned to a single gene; a peptide comprising on of 12011 sequences, mentioned in the specification, or encoded by the probes/open reading frames (ORF). The probes are used for gene expression analysis, and for identifying exons in a gene, particularly using human lung derived mRNA and for the study of lung diseases such as asthma, lung cancer, chronic obstructive pulmonary disease (COPD), interstitial lung disease (ILD), familial idiopathic pulmonary fibers. Niemann-Pick disease, Hermansky-Pudlak syndrome, sarcoidosis, pulmonary haemosiderosis, pulmonary histiocytosis, lymphangioleiomyomtosis, The invention relates to a spatially-addressable set of single exon nucleic acid probes for measuring gene expression in a sample derive from human lung comprising single exon nucleic acid probes having on 12614 nucleic acid sequences mentioned in the specification, or the 1287 open reading frames derived from the 12614 probes. Also included are a microarray comprising the novel set of probes; the novel set of probes which hybridise at high stringency to a librosis, neurofibromatosis, tuberous sclerosis, Gaucher's disease, derived one of one

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    pulmonary dysplasia, primary ciliary dyskinesis, pulmonary hypertension and hyaline membrane disease. The present sequence is a peptide/protein encoded by a single exon probe of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   25-FEB-2000;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     06-SEP-2000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     EP1033405-A2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Arabidopsis thaliana.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       termination sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Protein identification; signal transduction pathway; metabolic hybridisation assay; genetic mapping; gene expression control;

                                                                                       Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogenic CC polypeptides. The proteins and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused by P. acnes. The disorders include SAPHO syndrome (synovitis, acne, pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis. P. acnes is also involved in infections of bone, joints and the central cc nervous system, however it is particularly involved in the inflammatory clesions associated with acne vulgaris. A method for detecting the presence or absence of P. acnes in a patient comprises contacting a cc. sample with a binding agent that binds to the proteins of the invention cand determining the amount of bound protein in the sample. The polypeptides may be used as antigens in the production of antibodies compression and activity of P. acnes production of antibodies compression and activity of P. acnes polypeptides and cc. therefore treat P. acnes infections. These antibodies can be used as called the compression and activity of P. acnes polypeptides and cc. therefore treat P. acnes infections. The antibodies may also be used as called the compression and activity of P. acnes polypeptides and cc. diagnostic agents for determining P. acnes presence, for example, by called the compression of the printed compression and activity of production of the printed compression and activity of production of the printed compression and activity of production of the printed compression and compression and activity of production of the printed compression and activity of production of the printed compression and compression and activity of production of the printed compression and compression and activity of production of the printed compression and compression and activity of production of the printed compression and c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      日
